Chat Application using Sockets

Swing

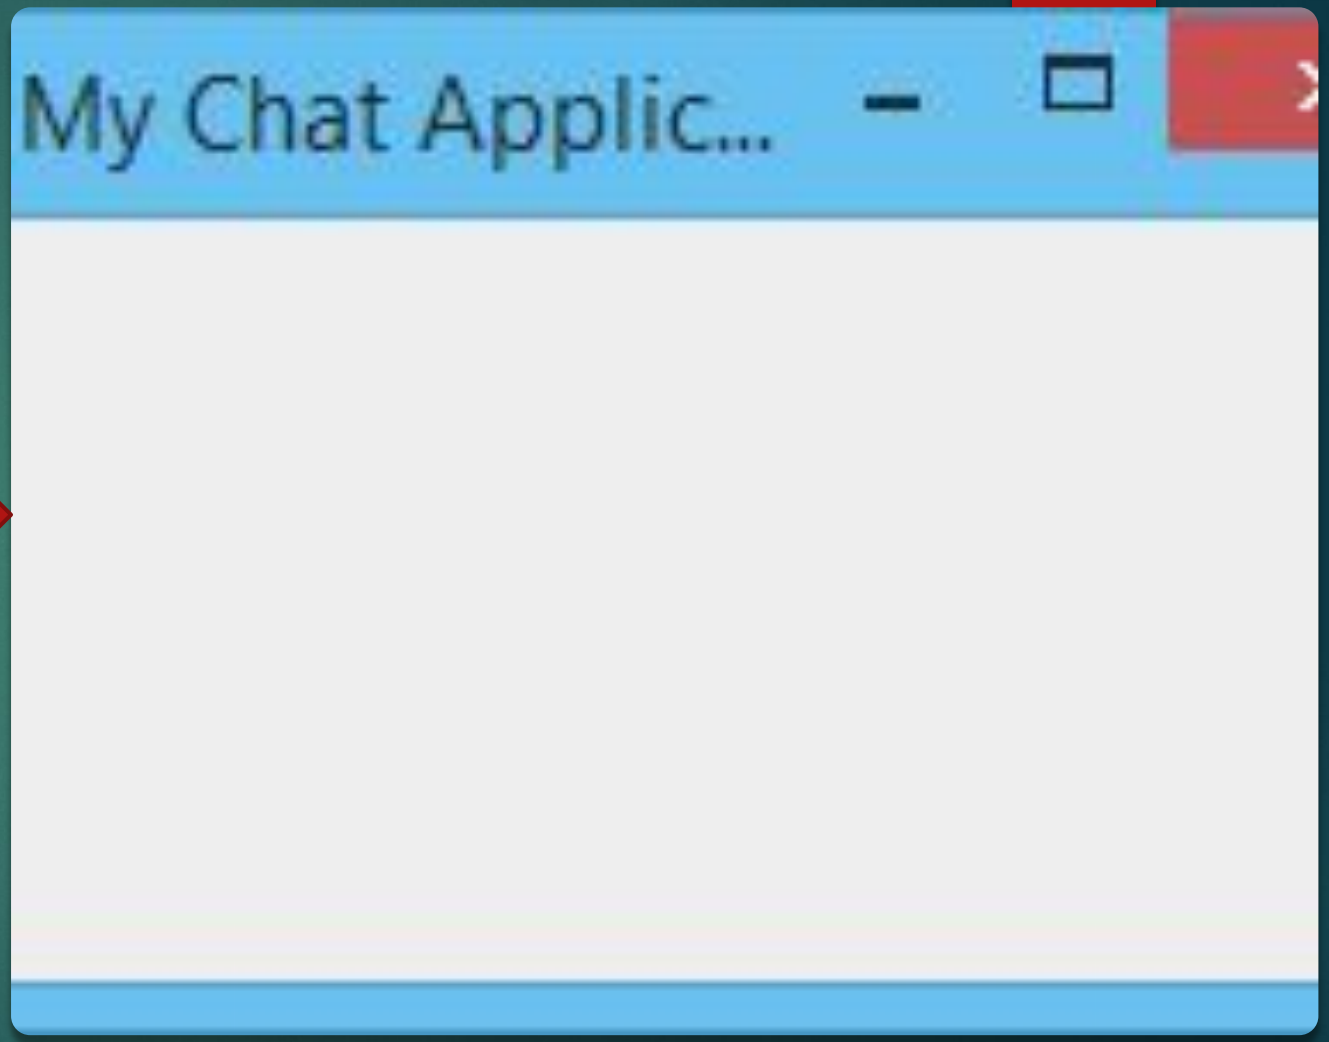

- **Swing Java** consists of
  Look and feel
  Accessibility
  Java 2D
  Drag and Drop, etc
- Swing, which is an extension library to the AWT, includes new and improved components that enhance the look and functionality of GUIs.
- Swing can be used to build Standalone swing gui Apps as well as Servlets and Applets.
- It employs a model/view design architecture. Swing is more portable and more flexible than AWT.

Swing Hierarchy

JFrame

```
public class ui{
    public static void main( String args[] ) {
        JFrame win = new JFrame( "My Chat Application" );
        win.setDefaultCloseOperation( JFrame.EXIT_ON_CLOSE );
        win.setSize(new Dimension( 250, 150 ));
        win.setVisible(true);
    }
}
```

JPanel

```
public class ui {

    public static void main( String args[] ) {

        JFrame win = new JFrame( "My Chat Application" );

        JPanel  panel = new Jpanel();

        win.add(panel):

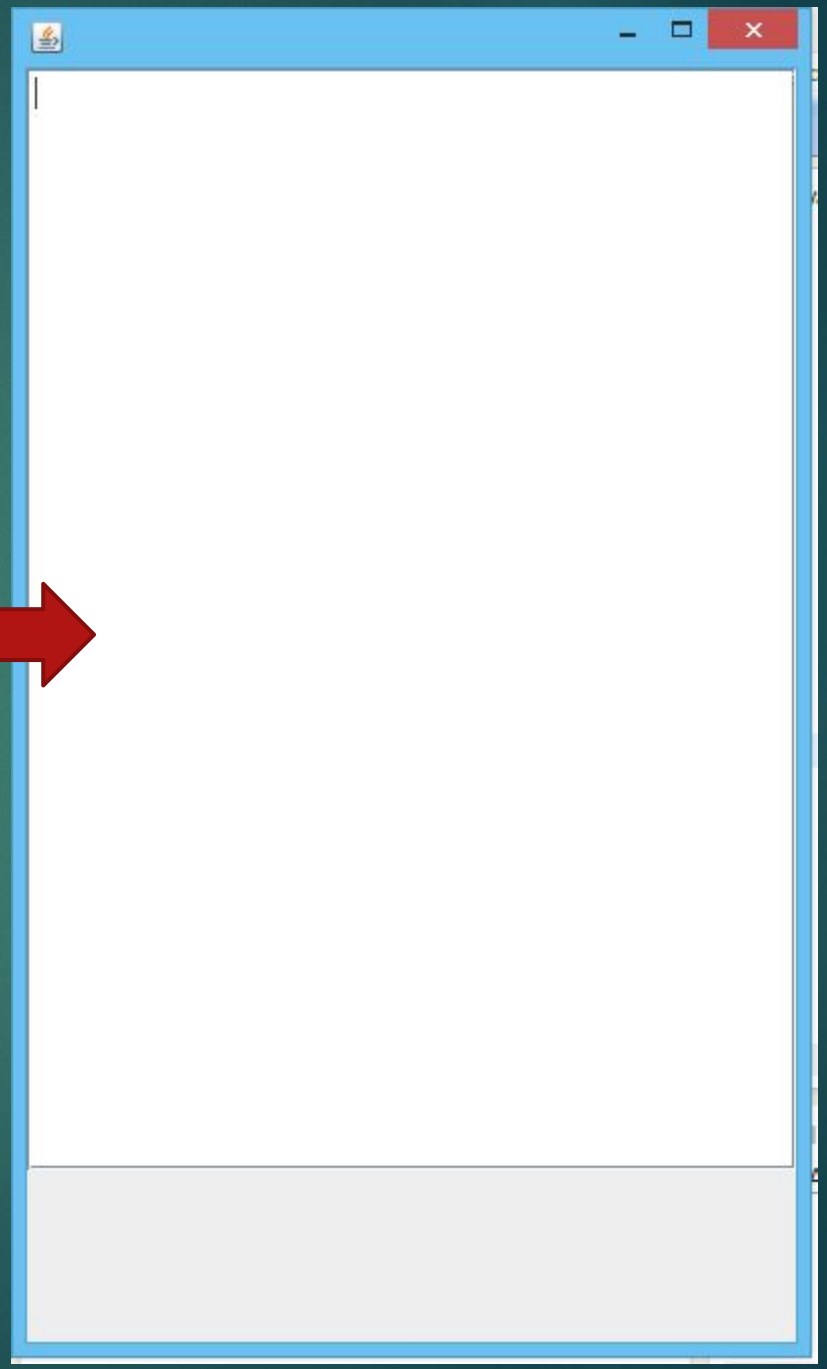

}

}
```

JTextPane

```
public static void main(String args[])
{
        JTextPane msg=new JTextPane();
        msg_view.setPreferredSize(new
            Dimension(40,400));
JScrollPane sp=new JScrollPane(msg_view);
panel.add(sp,BorderLayout.NORTH);
frame.add(panel,BorderLayout.NORTH);
}
```

Adding Styles to text

To differentiate user1 and user2 text from each other.

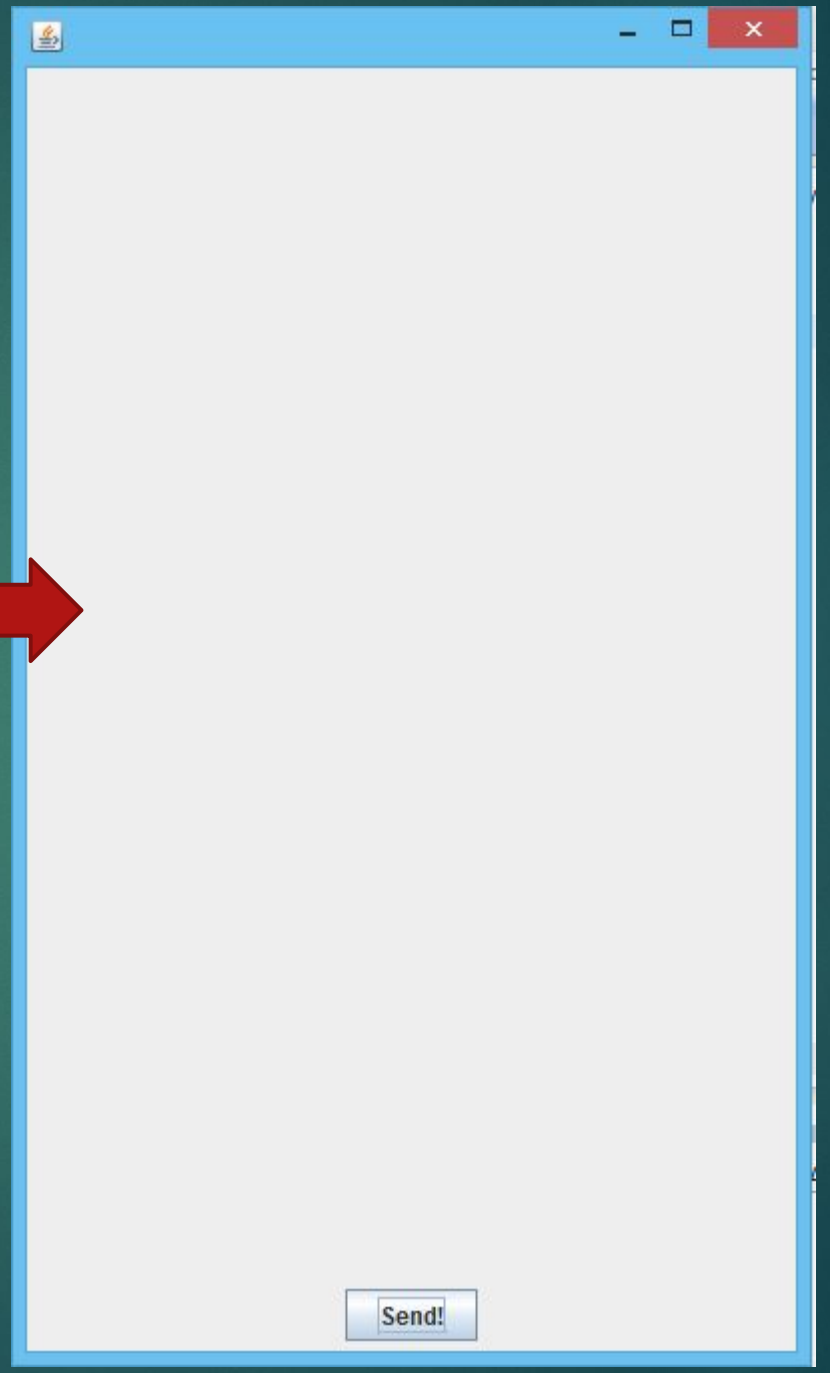

Let us give colors to user's text separately.

```
Style style = msg_view.addStyle("I'm a Style", null);
StyleConstants.setForeground(style, Color.blue);
```

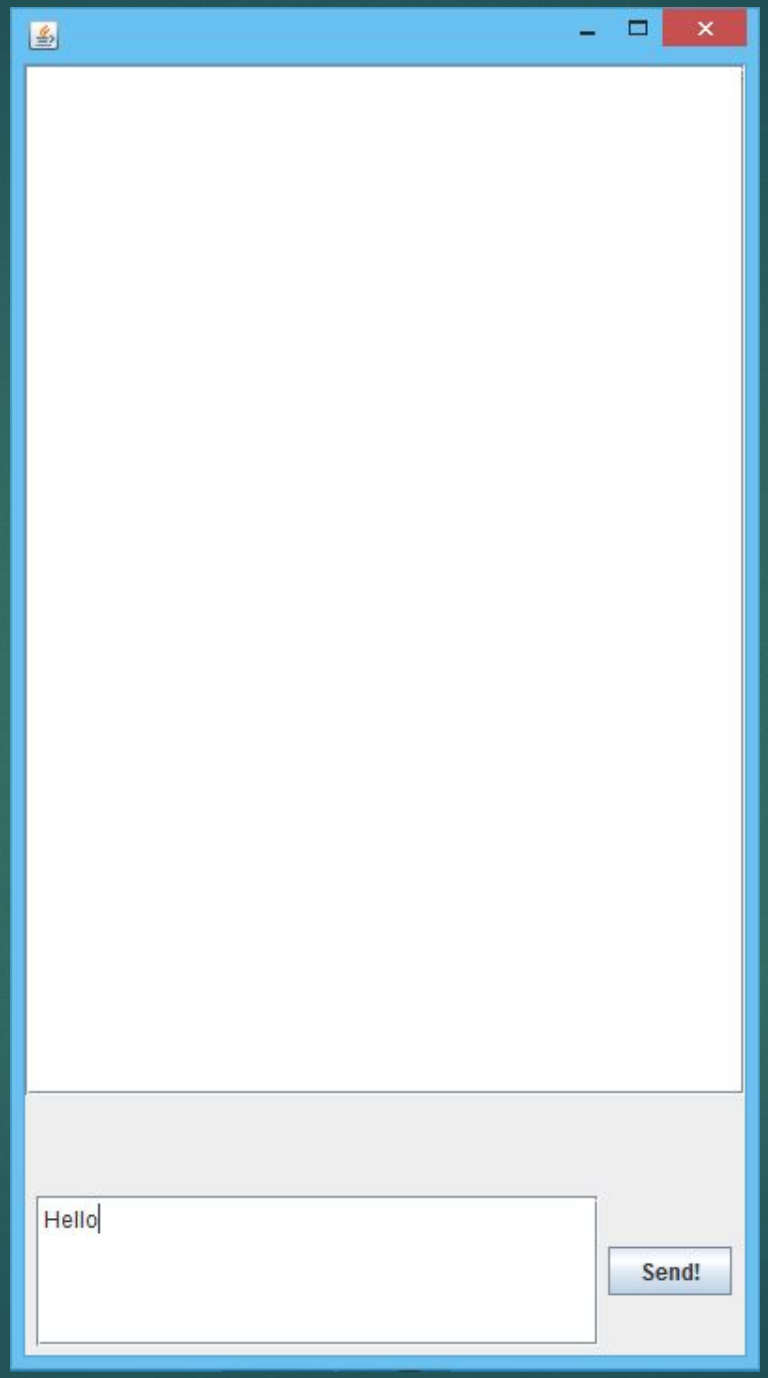

JButton

```
public static void main(String args[])
{
        send=new JButton("Send!");
        panel2.add(send);

frame.add(panel2,BorderLayout.SOUTH);
}
```

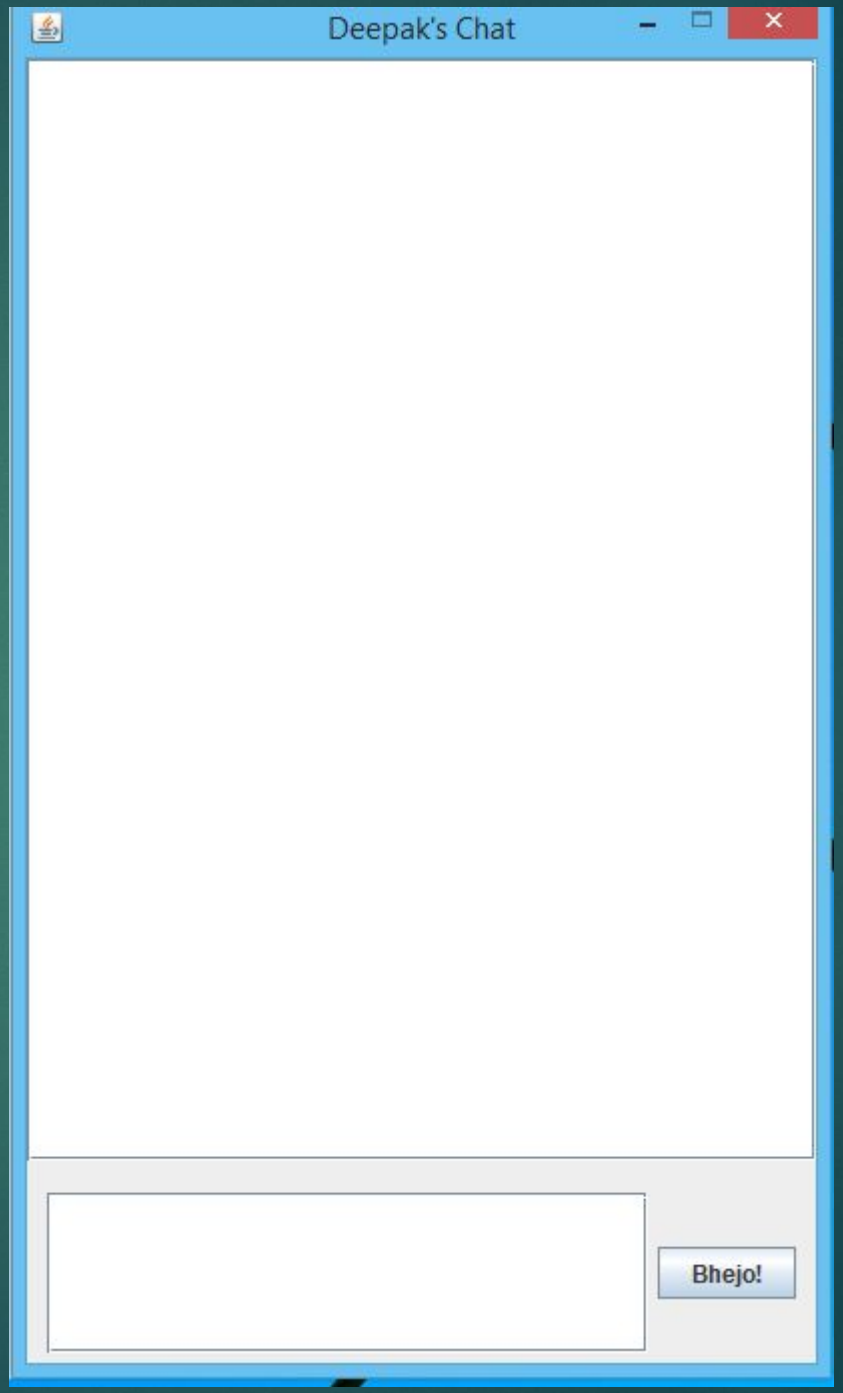

Chat Window

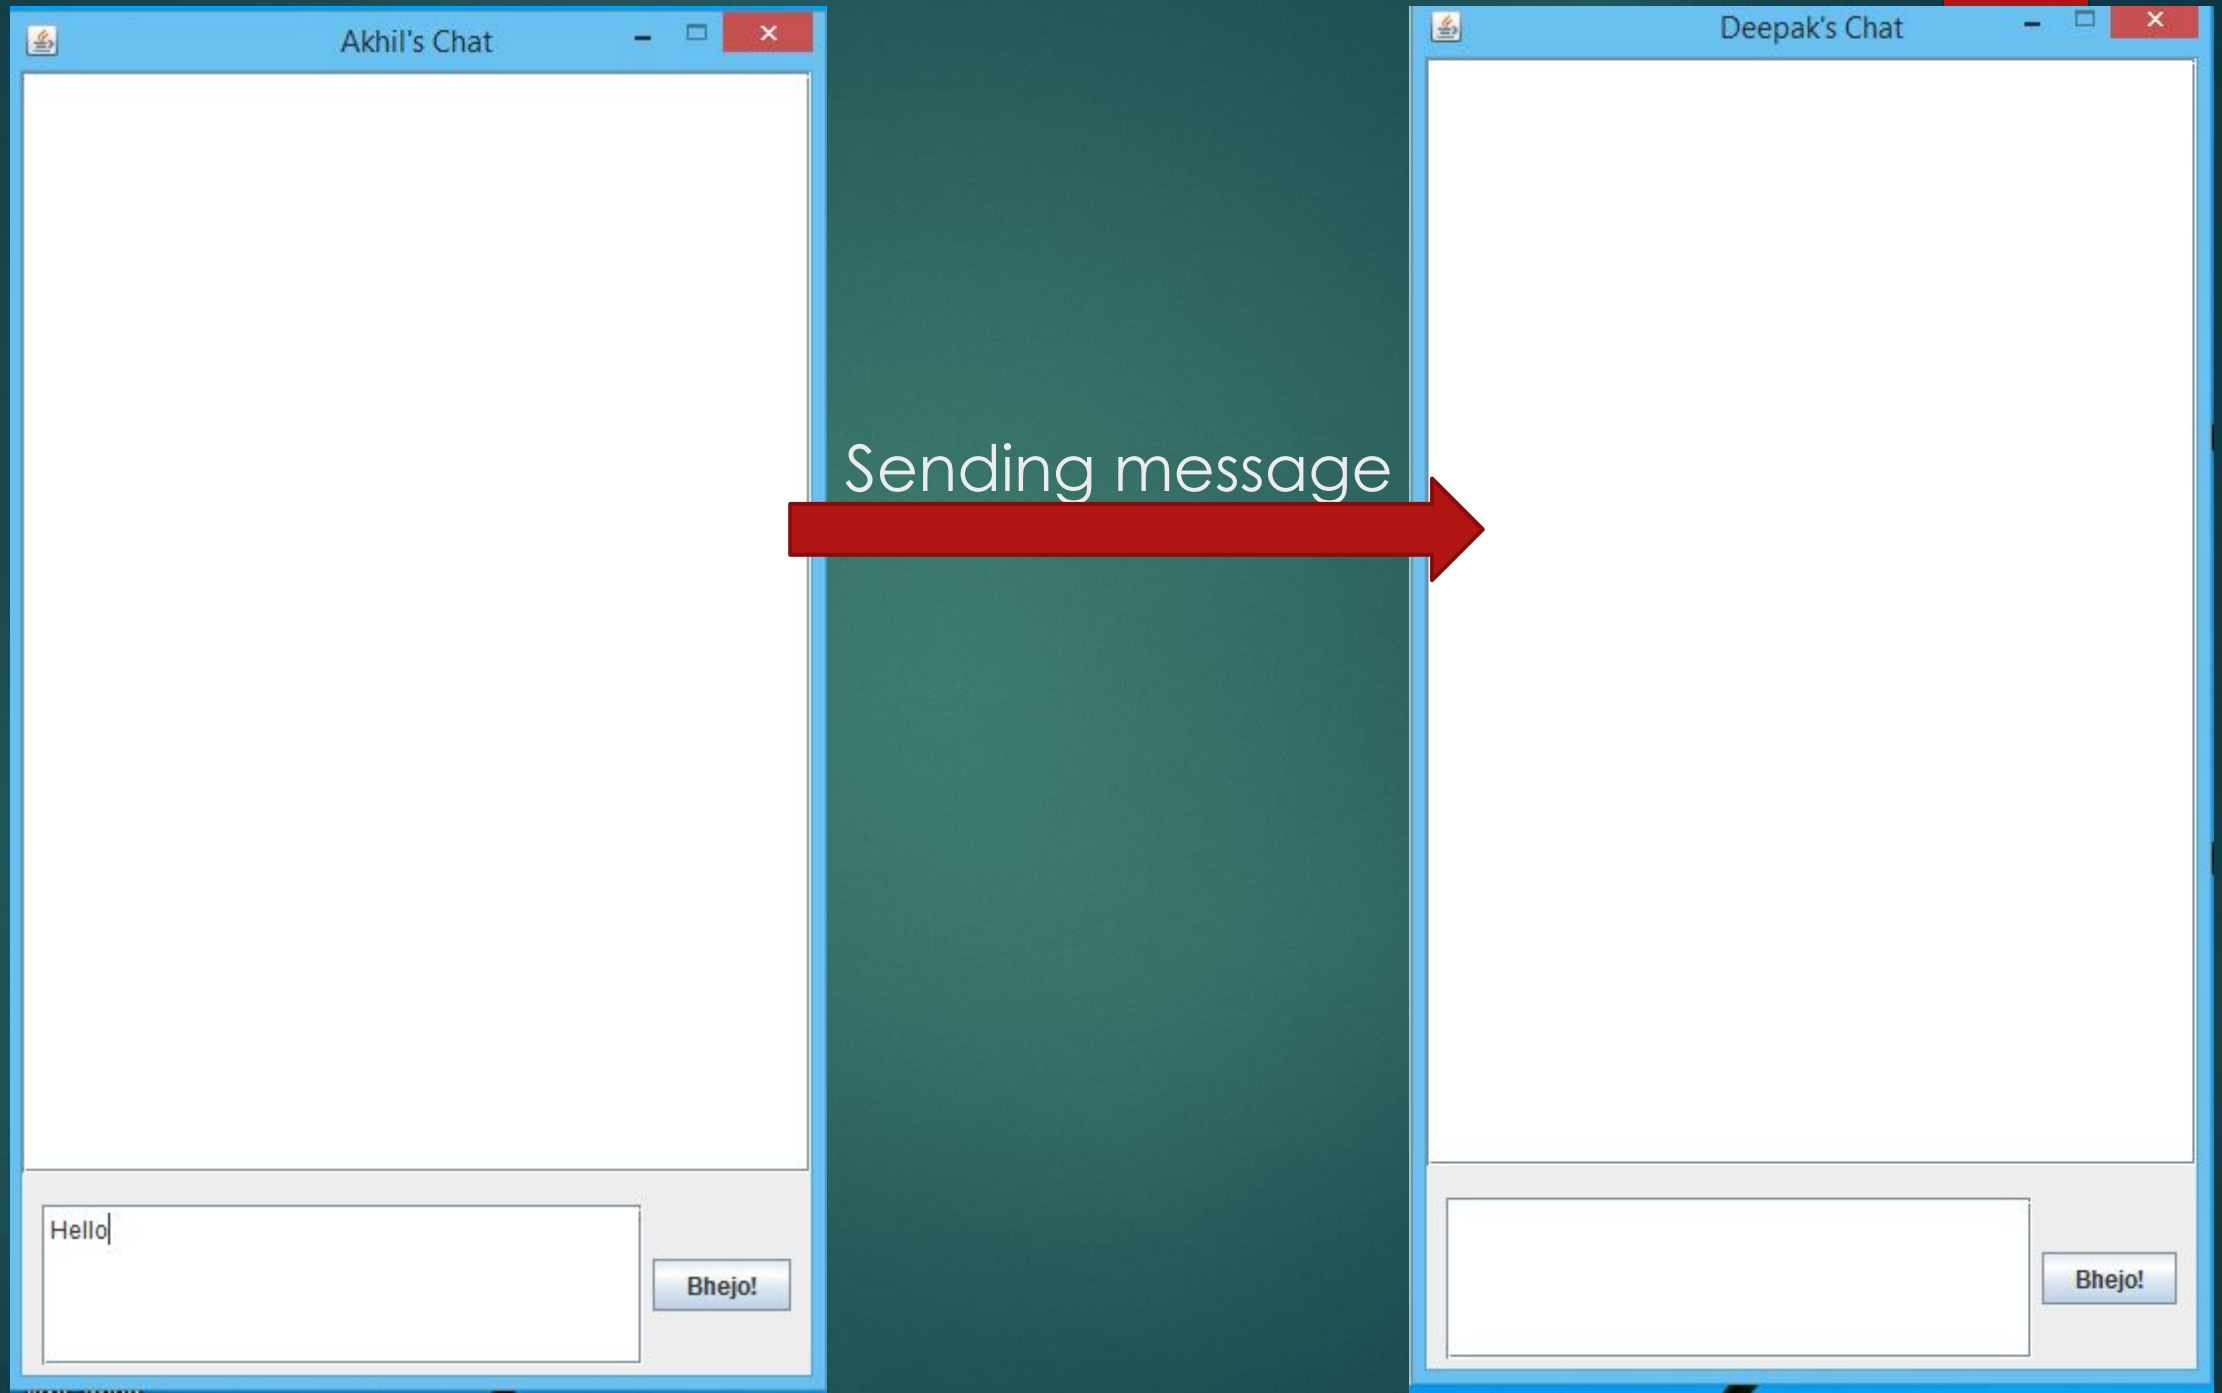

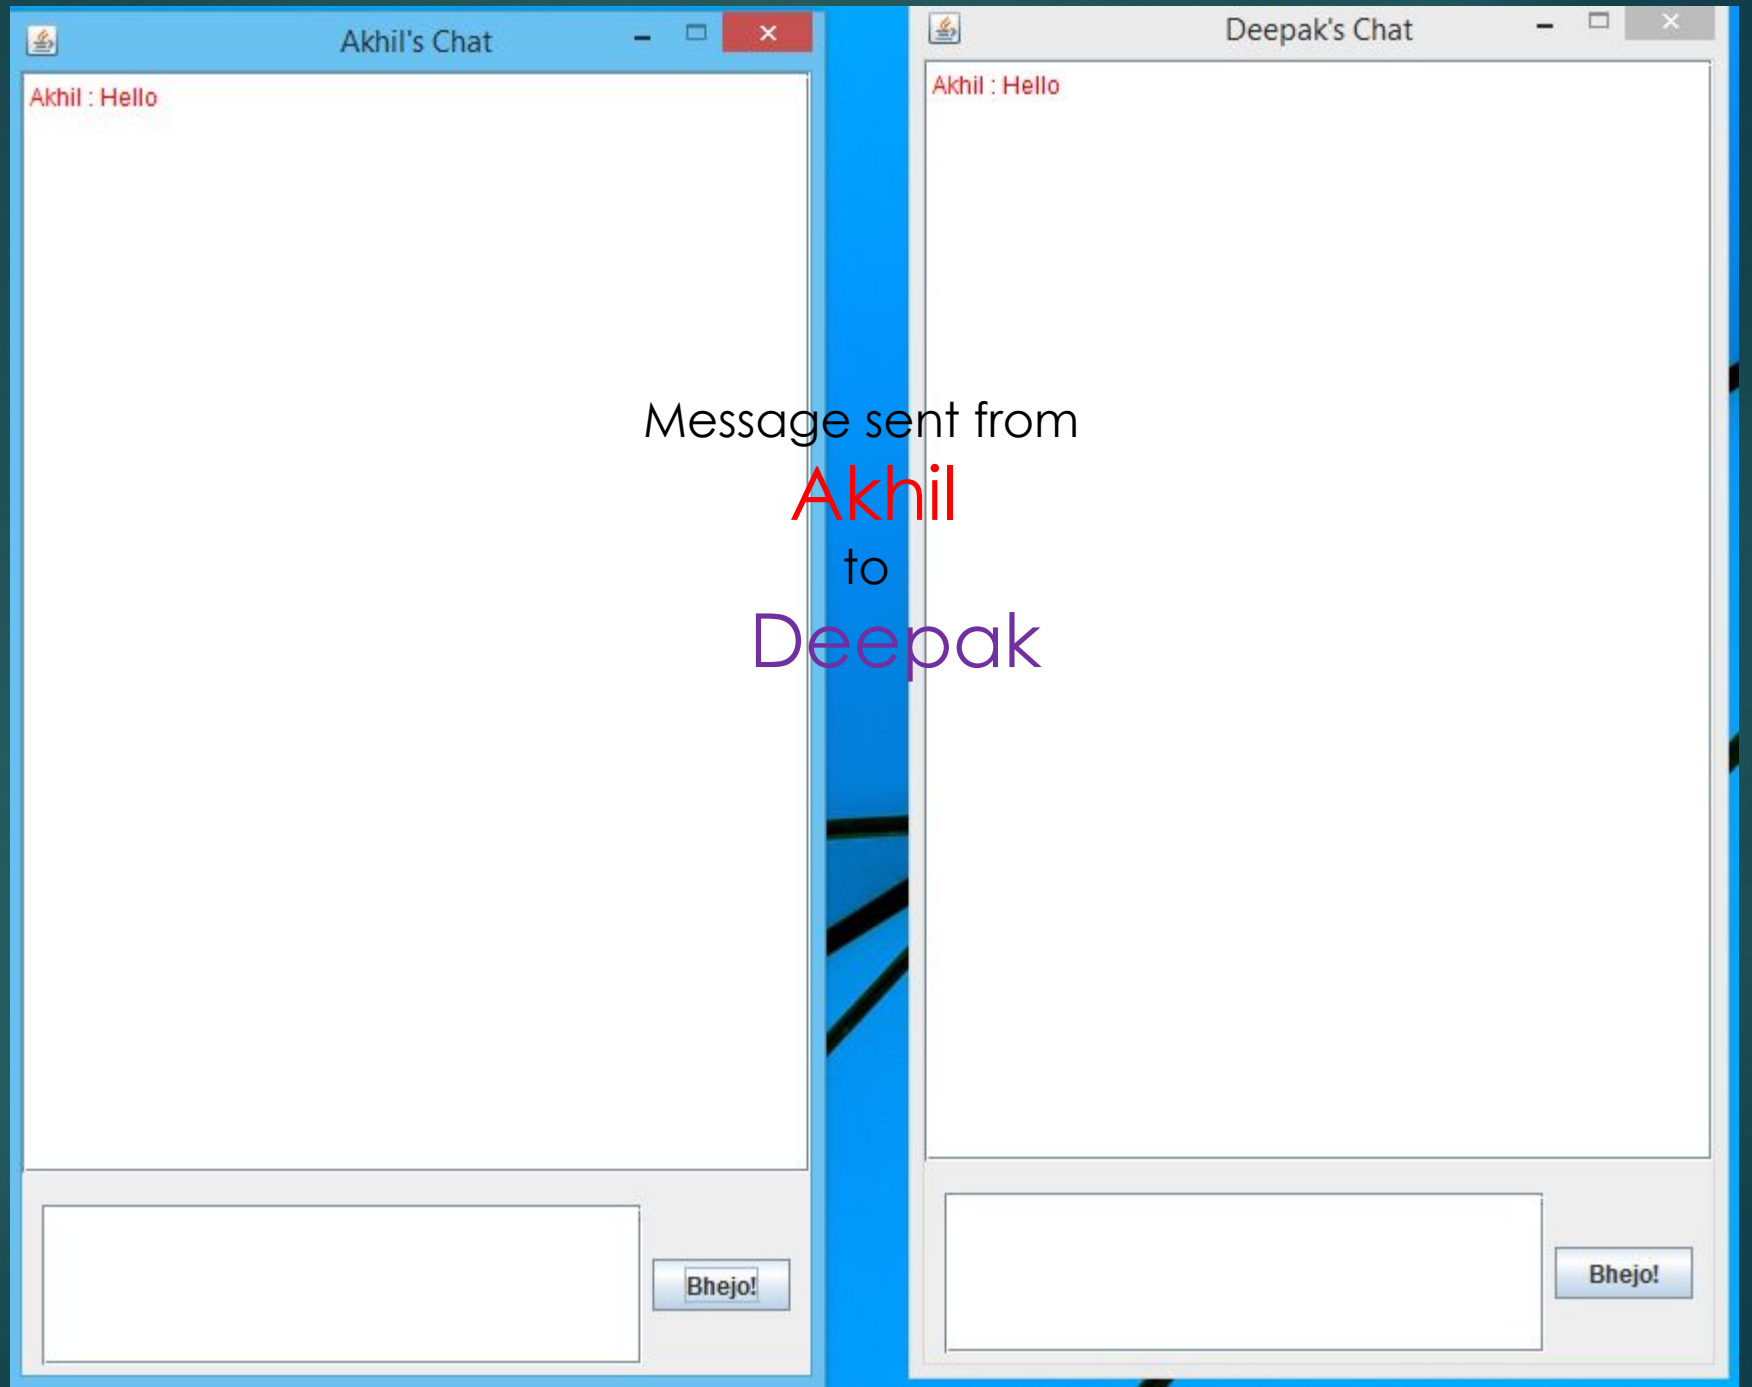

Sending and Receiving messages

- Both users must be able to send and receive messages.
- Receiving must be done continuously
- Sending must be done as an action of button “send!”click
